new titles

Ontario Economic Council Research Studies

Government Support of Scientific Research and Development

An economic analysis

D.G. McFETRIDGE

On the premise that state intervention can be justified only if it increases economic efficiency, this study assesses the merits of alternative forms of government intervention. Focusing on the conditions under which subsidies should be granted, it considers the effects of particular measures and examines the problem of determining the size of subsidy to be awarded. $5.00 paper

Public and Private Pensions in Canada

An economic analysis

J.E. PESANDO and S.A. REA JR.

At current contribution rates, the investment fund of the Canada Pension Plan will be exhausted before the end of the century. At an inflation rate of 8 per cent, the real value of today's private pension will be halved every ten years. The implications of these and related problems are explored in this incisive analysis which pinpoints the inadequacies of current provisions for retirement income and outlines the direction planning must assume if the intentions of pension programs are to be fulfilled. $6.00 paper

Speculation and Monopoly in Urban Development

Analytical foundations with evidence for Toronto

J.R. MARKUSEN and D.T. SCHEFFMAN

This study develops a model of the land development process, and applies it to the first documented examination of the Toronto land market. The results indicate that Toronto real estate is not controlled by a few large developers and that ownership concentration is too low to imply market power. The book concludes with a general consideration of the role of government in land development and a number of specific recommendations. $10.00 paper

Day Care and Public Policy in Ontario

M. KRASHINSKY

Krashinsky provides an important contribution to the debate on public policy on day care in Ontario. After tracing its development, his study focuses on two crucial points: should day care be subsidized and should the day care industry be regulated. Using a sophisticated economic model, he demonstrates that Ontario subsidies today are inefficient, and proposes a system of tax reductions which would assist more families and provide more facilities. $6.50 paper

Provincial Public Finance in Ontario

An empirical analysis of the last twenty-five years

D.K. FOOT

A timely contribution to a subject under much discussion, this detailed study provides both an historical account of, and an explanation for, the growth of provincial revenues and expenditures since the early 1950s. By concentrating on an analysis of the development of a single government over time, it adds a significant perspective to the literature concerned with the theoretical and empirical analysis of the behaviour of junior-level governments. $7.50 paper
